

AI Pediatric Pneumonia Detector

Patient Case Medical Report

Patient Name:	ahlam mohamed	Physician:	Dr. miloudi meroua amria (PHD Radiologist)
Patient ID:	1001	Hospital:	Ahmed Medagry Central Hospital
Date of Birth:	01\11\2022	Report Date:	2026-04-24 18:24
Blood Type:	A+		

1. Patient Registration

Email	ahmed@gmail.com
Phone	+213 33745667
Medical History	diabet type 1
Inherited Family Illnesses	blood pressor , cardiologist illnesses
Critical Clinical Notes	alergy to peniicile , week heart
Registered On	2026-04-13 18:26:25

2. Vital Signs Diagnostic Timeline

Total diagnostic sessions: 1

#	Date	Temp °C	SpO2 %	Fever	Cough	SoB	Confusion	Prediction	Confidence	Notes
0	2026-04-13 18:30	—	86.0	High	Wet	Moderate	Yes	Sick	100%	hard to take a breath

3. Home Treatment Plans

No home treatment plans recorded.

4. Hospitalisation Record

Diagnosis	pnemounia
Admission Notes	child , hardly take breath , fear of injections refuse take medicines (vomite 60% of time)
Instructions	child might have dihidration
Progress Notes	month later he haded a primary pnemounia symptions that was not detected early (mis diagnostic - as hard normal could)
Discharge Cond.	easy to breath , no vomiting
Saved At	2026-04-13 18:48:38

Discharge Criterion	Status
SpO2 > 94% stable	✓ MET
Fever-free 24h	✓ MET
Tolerating feeds	✓ MET
X-ray improved	✗ PENDING

Nurse Monitoring Tables: 4 recorded

Check Table 1 — 2026-04-13 19:12

#	Feature	Current Status	vs. Last	Notes
---	---------	----------------	----------	-------

1	Temperature	39		°C
2	Respiratory Rate	88%		breaths/min
3	Oxygen Saturation	low		Alert if <90%
4	Chest Indrawing	yes		WHO danger sign
5	Work of Breathing	hard		
6	Consciousness	yes		Any ↓ = CRITICAL
7	Feeding / Drinking	have appetit		
8	Chest Pain	yes		
9	Crackles	yes		
10	Breath Sounds	yes		
11	Cyanosis	no		Central = emergency
12	Antibiotic Dose Given	yes		Track compliance
13	Hours Since Last Fever	5		0 = currently febrile
14	Clinical Impression	pactirial pnemoinia		Nurse assessment
15	Red Flags Present	no		Count total

Check Table 2 — 2026-04-13 19:19

#	Feature	Current Status	vs. Last	Notes
1	Temperature	39.2	+	°C
2	Respiratory Rate	87	-	breaths/min
3	Oxygen Saturation	low	-	Alert if <90%
4	Chest Indrawing	yes	+++	WHO danger sign
5	Work of Breathing	hard		
6	Consciousness	mild		Any ↓ = CRITICAL
7	Feeding / Drinking	lose appetit	---	
8	Chest Pain	no	--	
9	Crackles	yes	---	
10	Breath Sounds	yes		
11	Cyanosis	yes	+	Central = emergency
12	Antibiotic Dose Given	yes		Track compliance
13	Hours Since Last Fever	2		0 = currently febrile
14	Clinical Impression	getting worse		Nurse assessment
15	Red Flags Present	start of naill Cyanosis		Count total

Check Table 3 — 2026-04-13 19:19

#	Feature	Current Status	vs. Last	Notes
1	Temperature	40	++	°C

2	Respiratory Rate	85	--	breaths/min
3	Oxygen Saturation	low	--	Alert if <90%
4	Chest Indrawing	yes	+	WHO danger sign
5	Work of Breathing	hard	-	
6	Consciousness	yes	+++	Any ↓ = CRITICAL
7	Feeding / Drinking	no	--	
8	Chest Pain	no	---	
9	Crackles	no	--	
10	Breath Sounds	yes	-	
11	Cyanosis	yes	++	Central = emergency
12	Antibiotic Dose Given	yes	+	Track compliance
13	Hours Since Last Fever	0		0 = currently febrile
14	Clinical Impression	bad	++	Nurse assessment
15	Red Flags Present	vomiting	+	Count total

Check Table 4 — 2026-04-13 19:23

#	Feature	Current Status	vs. Last	Notes
1	Temperature	39.6	-	°C
2	Respiratory Rate	82	--	breaths/min
3	Oxygen Saturation	low	--	Alert if <90%
4	Chest Indrawing	yes	++	WHO danger sign
5	Work of Breathing	hard	-	
6	Consciousness	yes	+	Any ↓ = CRITICAL
7	Feeding / Drinking	no	-----	
8	Chest Pain	no	-	
9	Crackles	no	--	
10	Breath Sounds	yes	-	
11	Cyanosis	yes	+	Central = emergency
12	Antibiotic Dose Given	yes		Track compliance
13	Hours Since Last Fever	1		0 = currently febrile
14	Clinical Impression	needs feeding , go bad		Nurse assessment
15	Red Flags Present	dehydration , lost of energy , risk of colabse		Count total

5. X-Ray Studies

Total X-ray images stored: **1**
